Based on decades of established research findings in cognitive and developmental psychology, this volume explores and integrates the leading scientific advances into infancy and brain-memory linkages as well as autobiographical and strategic memory. In addition, given that the predominantly classic research on memory development has recently been complemented by more cutting-edge applied research (e.g., eyewitness memory, memory development in educational contexts) in recent years, this volume also provides in-depth and up-to-date coverage of these emerging areas of study.
