Electromagnetic Propagation in Multi-Mode Random Media (Wiley Series in Microwave and Optical Engineering) Harrison E. Rowe

Reflecting the growing importance of multi-mode transmission media in communications, radar, sensors, remote sensing, and many other industrial applications, this work presents analytic methods for calculating the transmission statistics of microwave and optical components with random imperfections.

The emphasis here is on multi-mode waveguides, optical fibers, and directional couplers-described by the coupled line equations with random parameters-as well as multi-layer optical coatings used as windows, mirrors, or filters. The author clearly explains how to calculate the transmission statistics of these devices in terms of their coupling or optical thickness statistics, in both the time and frequency domains. This unique resource for engineers and researchers involved in the design of multi-mode transmission media:

- * Focuses on matrix techniques and the various types of problems to which they can be applied
- * Incorporates many new results developed by the author
- * Discusses applications to problems of significant practical interest
- * Demonstrates a purely analytical approach-not using Monte Carlo or other simulation methods

From reader reviews:

Nathan Herr:

Typically the book Electromagnetic Propagation in Multi-Mode Random Media (Wiley Series in Microwave and Optical Engineering) has a lot of knowledge on it. So when you make sure to read this book you can get a lot of gain. The book was written by the very famous author. Mcdougal makes some research previous to write this book. This specific book very easy to read you can obtain the point easily after reading this article book.

Jose Longoria:

The book untitled Electromagnetic Propagation in Multi-Mode Random Media (Wiley Series in Microwave and Optical Engineering) contain a lot of information on the idea. The writer explains the girl idea with easy means. The language is very straightforward all the people, so do not necessarily worry, you can easy to read this. The book was written by famous author. The author brings you in the new period of time of literary works. You can read this book because you can read on your smart phone, or product, so you can read the book with anywhere and anytime. In a situation you wish to purchase the e-book, you can available their official web-site in addition to order it. Have a nice study.

Patrick Myers:

Do you like reading a reserve? Confuse to looking for your preferred book? Or your book seemed to be rare? Why so many problem for the book? But almost any people feel that they enjoy regarding reading. Some people likes studying, not only science book but also novel and Electromagnetic Propagation in Multi-Mode Random Media (Wiley Series in Microwave and Optical Engineering) or even others sources were given knowledge for you. After you know how the truly great a book, you feel need to read more and more. Science e-book was created for teacher or maybe students especially. Those publications are helping them to add their knowledge. In other case, beside science guide, any other book likes Electromagnetic Propagation in Multi-Mode Random Media (Wiley Series in Microwave and Optical Engineering) to make your spare time far more colorful. Many types of book like here.

Hattie Adkins:

Many people said that they feel uninterested when they reading a reserve. They are directly felt this when they get a half portions of the book. You can choose the book Electromagnetic Propagation in Multi-Mode Random Media (Wiley Series in Microwave and Optical Engineering) to make your own reading is interesting. Your skill of reading proficiency is developing when you just like reading. Try to choose straightforward book to make you enjoy to study it and mingle the feeling about book and looking at especially. It is to be initially opinion for you to like to open a book and learn it. Beside that the guide Electromagnetic Propagation in Multi-Mode Random Media (Wiley Series in Microwave and Optical Engineering) can to be your new friend when you're truly feel alone and confuse using what must you're

doing of the time.
