## **Anthropometry: The Individual and the Population (Cambridge Studies in Biological and Evolutionary Anthropology)**

Anthropometry is the measurement of human morphology. In this volume, distinguished contributors including anthropologists, human biologists, physiologists, nutritionists, and clinical scientists describe many of the ways in which anthropometry is used, and discuss problems associated with different methods of assessment. Topics include the measurement of growth asymmetry and variability in adult body size, measurement error and statistical issues in anthropometry and the construction and use of growth charts in growth monitoring. The use of anthropometry in assessments of body composition, physical performance and fitness is also discussed. The book will be of interest to graduates and researchers in human biology, anthropology and nutrition. It will also be useful to workers in sports medicine, ergonomics, orthopedics, and pediatrics.
